How to meter

Before you make savings, you first need to know what you're spending!

If you keep a permanent tally of your consumption, you can plan for savings and maintain them over time.

Recurring issues

Focus on schools

- Monitoring the site's energy consumption.
- Make sure everyone in charge (even non-technical users) is able to use the supervision system.
- Managing rooms with different needs and equipments.
- Room occupancy planning.
- Complying with the latest environmental standards and labels (such LEED, BREEAM, etc.)

Our solutions

> Metering

- Input/output modules for multi-energy metering.
- Energy dashboard

Alerts on consumption drifts

> Ergonomics

The user interface is easy to use and very straightforward, so that staff on site can master it quickly.

> Adaptation

- Take into account the accommodation capacity, the occupation patterns, the installed equipment and the nature of each managed zone.
- The energy consumed is accurately adjusted to meet the needs.

+ Integration

Delta Dore is highly experienced in integrating different brands and protocols, and its solutions can manage products from several manufacturers on the same site.

+ Simplicity

No technical skills are required to control and monitor the facility.

+ Multi-energies

Our systems are designed for managing sites that use a variety of different energy sources, including both standard energies (fossil fuels and electricity, etc.), and renewable energies (wind farms, photovoltaic cells and heat pumps, etc.).
